Approved by the Board of Governors
Version II / 2010

HURRICANE POLICIES, PROCEDURES AND PREPARATIONS

Dear Galleon Residents:

We in South Florida annually experience hurricane season from June 1st through November 30th. During these months, special precautions need to be taken by everyone in the building. This guide is intended to help you **understand what to expect during a hurricane in a high-rise building and the actions YOU need to take.**

PLAN TO EVACUATE

A hurricane is probably the most devastating phenomenon that oceanfront property owners experience. The fact that we are members of a condominium community dictates that certain standards of deportment be understood, accepted and followed. Most importantly, THE GALLEON is in an evacuation zone. When an evacuation is ordered, EVERYONE is expected to leave the building and leave the barrier island. Employees and residents are ALL expected to evacuate. The building will be closed; there will be no emergency services during a storm; and authorities will not be available to help you. The cooperation of all THE GALLEON owners and residents is therefore essential.

Once we receive a **Hurricane "WARNING,"** THE GALLEON employees prepare the building for the storm and then leave. Power to the building's A/C will be shut off if an evacuation order is imminent and the elevators will ultimately be stopped on a high floor in case of flooding. This means that once the order is given, you should be packed and prepared to leave.

City of Fort Lauderdale Fire Department advises all elderly or handicapped residents not to wait for the official evacuation order. Please leave early.

PLAN AHEAD

Please make arrangements in advance to ensure where you will be staying during an evacuation. Have identification papers and insurance papers ready to take with you. Purchase supplies and medicine that you will need and have them on hand. Obtain extra money to have on hand (ATMs and banks may not operate after the storm). Fill your vehicle tank(s) with gasoline and charge your cell phones.

Implement as many precautions as practical in advance, such as removing all objects from the balconies and catwalks, closing hurricane shutters, and placing towels on windowsills and on the bottom of all exterior doors.

If you are leaving town for three (3) days or more during hurricane season (June 1st to November 30th), before you go, remove ALL items such as furniture, furnishings, and plants from your balcony and/or catwalk and secure the shutters, or assign a nearby relative or friend to do so. If you are going to have another person close up for you in your absence, you must give the front desk the person's name and telephone number. In the event of a storm, do not rely on THE GALLEON staff to make preparations for you. The staff's time will be totally consumed in securing the building's mechanical operations and common areas.

Enclosed you will find a comprehensive and detailed description and timeline of preparations and procedures. It is **ESSENTIAL** for your safety and knowledge of protocol that you read the entire package thoroughly. Please do not hesitate to contact the Management should you have any questions.

Prepared by:
The Security and Rules Committee
The Galleon Board of Governors
July 2006
Updated June 2010

HURRICANE PREPARATION GUIDE

WHAT IS A HURRICANE? USEFUL DEFINITIONS:

<u>Hurricane:</u>	A tropical storm with wind speeds of 74 mph or greater.
<u>Hurricane Alert:</u>	Designates that a hurricane is posing a possible threat to an area.
<u>Hurricane Watch:</u>	Designates that a hurricane constitutes an appreciable threat to an area within a 36-to-48-hour period.
<u>Hurricane Warning:</u>	Designates when an area is expected to feel the dangerous effects of a hurricane within 36 hours or less.

When a **HURRICANE "WATCH"** is issued, that is the time to prepare to evacuate, to clear ALL items from your balcony and/or catwalk, and secure all your shutters.

When a **HURRICANE "WARNING"** is issued and an evacuation order is given, you should proceed immediately to a predetermined shelter or other inland, non-coastal area. You need only to go inland 5 to 10 miles. If you live on a high floor, remember that the winds are stronger at higher elevations. Delays could cost you valuable time and possibly your life.

While Management will do its best to keep you informed of the status of the storm, you should listen to local radio or television stations for up-to-date national weather service advisories, as well as any specific instructions from local authorities. You are advised to have a small battery-powered radio with spare batteries.

Category 1 -- winds of 74 to 95 mph: Storm surge 4-5 feet above normal. No real damage to structures. Damage primarily to unanchored mobile homes, shrubbery and trees. Also, some coastal flooding and minor pier damage.

Category 2 -- winds of 96 to 110 mph: Storm surge 6-8 feet above normal. Some roof damage. Door and window damage to buildings. Considerable damage to vegetation, mobile homes and piers. Coast and low-lying escape routes flood 2-3 hours before arrival of the hurricane's center. Small craft in unprotected anchorage will break moorings.

Category 3 -- winds of 111 to 130 mph: Storm surge 9-12 feet above normal. Some structural damage to small residences and utility buildings with a major amount of curtain wall (an outer or enclosing wall) failures. Mobile homes are destroyed. Flooding near the coast damages smaller structures, and large structures are damaged by floating debris. Terrain lower than 5 feet above sea level may be flooded inland as far as 6 miles.

Category 4 -- winds of 131-155 mph: Storm surge 13-18 feet above normal. More extensive curtain wall failures with some complete roof structure failures on some small residences. Major erosion in beach areas. Major damage to lower floors of structures near the shore. Terrain lower than 10 feet above sea level may be flooded requiring massive evacuation of residential areas inland as far as 6 miles.

TORNADOES

Hurricanes can produce tornadoes or small vortexes. In Hurricane Wilma in 2005, vortexes caused damage on the Galt by blowing out windows and sucking out furniture and belongings from apartments and storefronts, and by picking up and dropping cars. Tornadoes are most likely to occur in the right-front quadrant of the hurricane but can also be found in the rain bands, well away from the center of the hurricane. If you hear a roaring wind like the sound of a train, rush to the nearest bathroom or hallway and close the door behind you. Even with hurricane shutters, there is no protection against tornadoes, so stay out of rooms with windows. Listening to a weather station can give you some warning of where a tornado may occur.

HURRICANE SHUTTERS

The approved requirements for hurricane shutter installation and the approved policy for putting up and removing the hurricane shutters are as follows:

1. All shutter installations must be permitted by the city and approved by the Building Manager.
2. Hurricane shutters must be white.
3. All shutters must be of the accordion type.
4. All shutters must be installed parallel to windows/doors.
5. If written permission is not obtained, shutters may be removed at resident's expense.
6. Before shutters can be approved, drawings & specifications must be submitted with the Approval Form to the office.

NOTE: Complete specifications and forms may be obtained at the Manager's office.

CLOSING OF SHUTTERS

Failure to close your shutters when out of residence during hurricane season will necessitate staff to close them in the case of a **TROPICAL STORM WARNING** OR **HURRICANE WATCH** at a cost to the resident of **\$100.00 per unit.**

ACTIONS YOU SHOULD TAKE UPON NOTIFICATION OF A HURRICANE HEADED OUR WAY

During a **HURRICANE WATCH**, remove all items from your balcony and catwalk, i.e., furnishings, furniture, plants, and anything affixed to the walls (these items can become destructive and deadly). If you are not going to be in residence, you need to make arrangements to get everything off the balcony by someone other than a staff person. Do not rely on the building's staff to make preparations for you; their time will be totally consumed in securing the building's mechanical operations and common areas.

Any damages caused by your flying personal property may result in **YOU** being held responsible for the cost to repair damages to property

or personal injury to others. The Association and Management will not be responsible for any damage caused by items from your balcony.

1. Secure all hurricane shutters. If YOU do not close and secure your shutters when out of residence, staff will close them during a **HURRICANE WATCH** at a cost to the resident of **\$100.00 per unit.**
2. Place towels on windowsills and on the bottom of exterior doors.
3. Secure all your windows and doors. Pull down all blinds and close drapes, etc.
4. Disconnect all electric appliances, except for the refrigerator (turn the thermostat to the highest setting). Place plastic bottles 3/4 full of water (to allow for expansion when frozen) in the freezer to make ice and to keep the freezer cold if power fails.
5. Place all necessary medical supplies and medications in a plastic bag or other watertight container. Be sure to have a 30-day supply of medication.
6. Obtain extra money to have on hand (ATMs and banks may not be operating after the storm).
7. Place all important documents in a watertight container or place them in a safe deposit box (in plastic bags in case of flooding).
8. Clean your tub with bleach (place plumbers putty around the drains for 100% seal) and fill with water, making sure to shut off the faucet completely. Keep a plastic bucket for flushing the toilet if water is shut off.
9. Fill your vehicle tank(s) with gasoline.

10. Plug a hard-wired phone (not cordless) directly into a phone jack to verify service, which should work in a power failure. If it works, use your cell phone to send *text messages*, which often get through when voice calls will not.
11. Call your family members and let them know where you are going if necessary for you to evacuate. Phone service might be out, due to high winds, by the time you get to your destination. Designate an out-of-area relative as a contact because it may be easier to call long-distance than locally.
12. Leave the following information on your refrigerator (in case Security or EMS needs to enter if you do not evacuate or at any time you may need help—you can pick up an Emergency Medical Contact Information packet from the office):
 - a. Doctors' names and phone numbers
 - b. Drug allergies
 - c. Health insurance name and phone number and policy number
 - d. List of all medications
 - e. Emergency contact information.
13. Close the main water shutoff valve (located in your hall A/C closet or in the closet next to the kitchen door). You need to make sure your valve operates properly before it becomes an emergency. Turn off circuit breaker to hot water heater.
14. During a **HURRICANE "WATCH"** reschedule any deliveries. In a **HURRICANE "WARNING,"** all delivery trucks will be turned away.
15. Notify Security in writing of where you will be staying and a phone number where you can be reached. There is a form included in this package. These forms are also available at the security desk.

EMERGENCY SERVICES

Be aware that emergency services (police and fire) may not be available in a timely fashion, if at all, due to impassable roadways during and after a hurricane. Safety and those most in need become the priority. If you have a medical condition that requires

special equipment, treatments, or uninterrupted electricity, or if you need daily assistance, you should make special arrangements (see page 6).

The City of Fort Lauderdale implements the **CodeRED®** Emergency Notification System by calling you with any emergency notifications. It is free to join and your personal information will be kept confidential. You may register for this service at 954-828-8000 or at www.fortlauderdale.gov.

STAFF

The staff will only be available until the evacuation deadline and will be occupied with securing the mechanical operations and all common areas. All staff persons will leave by the evacuation deadline.

SPECIAL NEEDS INFORMATION

If you or a family member receives home health care, or requires electricity for life-support equipment, make emergency plans with the individual's physician.

If the individual with special needs must evacuate, **PREREGISTER NOW** with the Special Needs Registry maintained by Broward County's Office of Emergency Management at 954-537-2888. Make a list of prescribed medicines and plan to have a 30-day supply available.

INSURANCE

If you have property insurance, find your policy and make sure your coverage is adequate. (Seek advice from your agent.) Be sure to have a corporate headquarters number to call in case your agent is unavailable.

Pictures and videos of the contents of your unit are crucial if you need to put in a claim to the insurance company. In addition,

copies of warranty booklets with model and serial numbers of your personal property should be kept with the pictures. If you leave your unit, take copies of your pictures and policies with you.

If you do not have personal property insurance, obtain coverage now before it is too late! Once a named storm is within a certain area (the Storm Box), as determined by the insurance companies, you will not be able to buy insurance. If you do not have insurance, we urge you to get coverage now. The Association's insurance does not cover any of the contents of your apartment.

HURRICANE SURVIVAL KIT CHECKLIST

When purchasing supplies, keep your family size in mind. Try to buy sizes of food that you can use up in one meal. Many canned foods spoil or deteriorate rapidly after being opened. If you don't open your refrigerator for 24 hours after a power failure, you should be able to use the food. If meat is still partially frozen, you can refreeze it. If frozen vegetables still have ice crystals, they can be refrozen. Discard any food unrefrigerated for more than two hours. Buy a Sterno camp stove or chafing dish with Sterno for cooking in a long power outage. Have at least one change of clothes for each family member in a large plastic zip-lock bag. Keep the following items handy:

- Batteries
- Battery-powered alarm clock
- Battery powered radio or digital TV (available at electronics stores starting at about \$100)
- Bread, crackers in zip-lock bags
- Bottled water (1 gallon per person per day) for 3 to 5 days (you can fill well-cleaned soda bottles, but milk bottles are not advised)
- Boxed juices, boxed milk, powdered meal-replacement drinks
- Candles (preferably inside glass), lighters or matches in a waterproof bag
- Cash for two weeks' needs, ATM and credit cards, driver's license, insurance card in watertight container

- Cell phone car charger and an extra cell phone battery
- Chlorine bleach (unscented) and a medicine dropper to decontaminate water
- Cooler to hold ice and food
- Duct tape or masking tape, rubber gloves
- First aid kit (fully stocked)
- Flashlight for each person and battery-powered lanterns (buy where camping supplies are sold)
- Full automobile tank(s)
- Insurance and other important papers (in zip-lock bags)
- Manual can opener and bottle opener
- Map or directions to shelter locations
- Medications (Rx, aspirin, antacid, antibiotic cream, cough and diarrhea medicine)
- Nonperishable items: soup, canned meat, fruit, vegetables, etc.
- Paper goods, plates, cups, plastic flatware, aluminum foil
- Personal toiletries and hygiene products
- Plastic food bags and trash bags (get plenty)
- Refrigerator thermometer (should read 41° or lower)
- Roll of heavy plastic to cover broken windows
- Soap and shampoo, hand sanitizer
- Sterno stove and cans (buy where camping supplies are sold)
- Toilet paper, moist wipes, and paper towels
- Valuables, extra eye glasses and extra keys
- Water in bathtub and pail for flushing toilet

OUT-OF-RESIDENCE HURRICANE PROCEDURES

Each owner or resident who plans to be absent from their apartment for three (3) days or longer during the hurricane season (June 1st to November 30th) must prepare his or her apartment prior to departure.

Remove all items such as furniture, furnishings, plants, satellite dishes, etc., from the balcony and catwalk. If items are left on the balcony or catwalk, staff personnel will remove them only if time allows, and the resident will be charged a \$100.00 fee per unit.

Securely lock outside doors. Interior doors should be closed. Shut off water and unplug appliances, computers, TVs, and other electrical items (except refrigerator).

A resident may designate a responsible agent or individual to care for the unit during the occupant's absence. The agent may remove any personal property from the balcony prior to a potential hurricane. The name, address and current working phone number of this agent shall be filed in the manager's office annually, but it is the resident/lessee's responsibility to contact the designated caretaker. THE GALLEON ASSOCIATION shall be under NO obligation to contact the agent for any reason. The purpose of their designation is solely for identification to permit entry onto the property and into the apartment.

Owners shall be liable for any damage to another unit, common property, or personal injury caused by their windblown property. THE GALLEON ASSOCIATION accepts no responsibility for oversights or nonperformance. Association personnel may visually survey the balconies externally for compliance with this requirement. Any potentially hazardous articles detected will be moved inside the apartment and a fee will be charged. This procedure will be followed only if time allows. THE GALLEON ASSOCIATION will not be responsible for any hazardous articles left on the balconies.

IN THE EVENT OF AN EVACUATION, POLICE PROCEDURES ARE TO BE FOLLOWED

During an evacuation, police may have checkpoints to permit only residents and employees to enter the barrier island. We suggest that you carry your driver's license with your GALLEON address on it, or request a resident letter from the management office to present to the authorities. **DO NOT REQUEST THIS LETTER FROM MANAGEMENT THE DAY OF THE STORM. PLEASE REQUEST YOUR LETTER NOW.**

SHELTER INFORMATION

The closest shelters will be reported as the storm approaches. The nearest Regional Shelter is Pompano Beach Institute of International Studies High School, 1400 NE 6th St., Pompano Beach. (*see attached map*)

The public shelters are far from comfortable. You are limited in the items you can take with you. You will need to bring a bedroll, pillow, cash/traveler's checks, flashlights, toilet paper, important papers and identification, personal hygiene products, medications, battery-operated radio. Bring food and water for at least three days, and at least two changes of clothes for each member of your family.

STAYING IN YOUR APARTMENT DURING THE STORM

If there is an evacuation order, you should leave the building. Emergency services will not be available to assist you. There will be no staff, no air conditioning, and no water. You are advised to leave.

ANY RESIDENT WHO STAYS IN THE BUILDING DURING AN EVACUATION DOES SO AT HIS/HER OWN RISK. YOU MUST NOTIFY THE MANAGER OF YOUR WHEREABOUTS AND COMPLY WITH ANY POLICE AND BUILDING PROCEDURES.

If you stay in the building, you may feel the building swaying slightly in high winds. This is normal – do not be alarmed.

BUILDING EQUIPMENT AND MISCELLANEOUS INFORMATION

Whenever evacuation of the building has been advised or ordered by a government agency having jurisdiction in the matter, the Board shall take action to protect the Association property.

Since the employees will have to leave at the evacuation deadline, preparation must start several hours prior to the storm's landfall. All passenger elevators and water towers/air conditioning will be shut down in order to protect the equipment during the storm.

AIR CONDITIONING AND WATER

The AC heat exchangers depend upon two electrically operated submerged pumps in order to function. The water supply is also dependent on electric pumps, which are located in the sub-basement. Should these pumps suffer water damage while running, they will short and burn out. For this reason, all pumps will be shut down when there is flooding potential.

ELEVATORS

At the approach of a storm, management may elect to shut down all elevators. **DO NOT USE ELEVATORS DURING A POWER FAILURE.**

Wind pressure could cause the elevator doors to be stuck due to the suction in the shaft. It is recommended that you stay in your apartment until the winds go below 70 mph; however, if you must leave your unit, it is strongly advised that you use the stairs and carry a flashlight. Please **DO NOT** open your foyer door when any windows or balcony doors are open, because it can create a wind tunnel down the shaft and cause the elevator to be stuck.

DRINKING WATER

Immediately following a hurricane **do not** use tap water until you know it is safe. Boil water at a rolling boil for one minute. If you do not have power, mix 8 drops (1/8 teaspoon) of unscented chlorine bleach per gallon of water and let stand for 30 minutes. If cloudy, add 16 drops (1/4 teaspoon) of bleach and let stand 30 minutes. The water will not be toxic, though it may have a chlorine odor and taste.

ELECTRICITY

If power is lost, the elevators, fire stairwell lights, and scattered garage lighting will remain on as long as the emergency generator works. There will be no electricity in your apartment. It is a good idea to have a hard-wired phone that does not use electricity. Portable phones will not work without electricity. Cell phones may not work.

EMERGENCY GENERATOR

The generator has only enough fuel to run the elevators and fire stairwell lights for approximately 16 hours. Please make sure each person in your household has a flashlight available to use if all services are out.

KEEP A FLASHLIGHT READY FOR EXITING DOWN HALLS AND STAIRS.

POOL

A day or two before a possible hurricane the pool will be lowered approximately two feet and hyper-chlorinated. The pool will be unavailable until our pool man advises us that the chemical level is safe to resume entering the pool. This usually happens 1-2 days after the storm has passed. All pool furniture will be stored during the **HURRICANE "WATCH."**

RETURNING TO THE BUILDING

After the storm passes, avoid returning to the building immediately. Roadways may still be impassable, making it impossible to reach the building. Electricity and water may not be available, and therefore there will be no air conditioning. The emergency generator may be out of fuel, causing lack of elevators and no lights in stairwells and common areas. Upon return, you should have food and water on hand in your apartment to carry you through until services are restored. In past years, some areas hit by hurricanes were out of power for over two weeks.

STAFF RETURN

Please note that all staff evacuates the building during a **HURRICANE "WARNING."** Should the hurricane hit, roads may be blocked and impassable. Staff will return to the building as soon as possible (which may vary from staff person to staff person). If you choose to stay in the building and the air conditioning and elevators are down, please note that they will remain down until the proper personnel return to the building and turn the equipment back on.

DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO POWER UP BUILDING EQUIPMENT YOURSELF.

2006 Hurricane Wilma Damages to the Galleon

Main Lobby windows broke, floor had water/glass

Parked van flipped by vortex winds at circle

Cooling towers collapsed by high winds

Roof observation railings collapsed

Catwalk lattice railing destroyed by winds

BRIEF SUMMARY

PREPARATIONS YOU CAN START NOW

1. Make a standing reservation at a local hotel.
2. Make a standing reservation with a repairperson to close your hurricane shutters and bring in anything on your balcony and/or catwalk, if you are unable to do this yourself.
3. Stock up on items (refer to Survival Kit, pages 7-8).
4. Put information on refrigerator (see page 5, #12)
5. Insure that your main water cut-off valve in your unit is working properly.
6. Review your property insurance policy or obtain proper insurance if you are not already insured.
7. Preregister anyone with special needs with the Special Needs Registry (see Special Needs section, page 6).

2-3 DAYS PRIOR TO HURRICANE POSSIBILITY

1. Note that the pool will be closed and lowered approximately 2 feet and hyper-chlorinated.
2. Stock up on any additional items that you still need.
3. Obtain extra cash to have on hand, as ATMs and banks may not be available after the storm.
4. Fill your vehicle tank(s) with gasoline.
5. Advise Security in writing of where you will be staying. If you choose to stay in the unit, advise management in writing that you will stay. (Complete a copy of the form on page 17 from Security.)

HURRICANE WATCH

1. Note that all pool furniture will be stored and the pool closed.
2. Remove all items from your balcony and/or catwalk.
3. Close and secure all hurricane shutters.
4. Close and secure all windows and doors.
5. Place towels on windowsills and bottom of doors.
6. Prepare all medications, medical supplies, and important documentation in a watertight container.
7. Clean your bathtub with bleach and fill with water.
8. Call your family members to advise where you will stay.
9. Cancel all deliveries.

HURRICANE WARNING / EVACUATION

1. Turn off your main water valve.
2. Turn off hot water heater.
3. Shut off the breaker to your hot water tank.
4. Residents should evacuate.
5. Water towers and air conditioning will be shut down.
6. Passenger elevators will be shut down.
7. Front doors to lobby will be locked.
8. Assigned parking will no longer apply.
9. Building will be shut down.
10. Staff will leave.
